**House of Debt** Atif Mian 2015-05-20 The Great American Recession resulted in the loss of eight million jobs between 2007 and 2009. More than four million homes were lost to foreclosures. Is it a coincidence that the United

States witnessed a dramatic rise in household debt in the years before the recession—that the total amount of debt for American households doubled between 2000 and 2007 to \$14 trillion? Definitely not. Armed with clear and powerful evidence, Atif Mian and Amir Sufi reveal in *House of Debt* how the Great Recession and Great Depression, as well as the current economic malaise in Europe, were caused by a large run-up in household debt followed by a significantly large drop in household spending. Though the banking crisis captured the public's attention, Mian and Sufi argue strongly with actual data that current policy is too heavily biased toward protecting banks and creditors. Increasing the flow of credit, they show, is disastrously counterproductive when the fundamental problem is too much debt. As their research shows, excessive household debt leads to foreclosures, causing individuals to spend less and save more. Less spending

means less demand for goods, followed by declines in production and huge job losses. How do we end such a cycle? With a direct attack on debt, say Mian and Sufi. More aggressive debt forgiveness after the crash helps, but as they illustrate, we can be rid of painful bubble-and-bust episodes only if the financial system moves away from its reliance on inflexible debt contracts. As an example, they propose new mortgage contracts that are built on the principle of risk-sharing, a concept that would have prevented the housing bubble from emerging in the first place. Thoroughly grounded in compelling economic evidence, House of Debt offers convincing answers to some of the most important questions facing the modern economy today: Why do severe recessions happen? Could we have prevented the Great Recession and its consequences? And what actions are needed to prevent such crises going forward?

*The End of Public Schools* analyzes the effect of foundations, corporations, and non-governmental organizations on the rise of neoliberal principles in public education. By first contextualizing the privatization of education within the context of a larger educational crisis, and with particular emphasis on the Gates Foundation and influential state and national politicians, it describes how specific policies that limit public control are advanced across all levels. Informed by a thorough understanding of issues such as standardized testing, teacher tenure, and charter schools, David Hursh provides a political and pedagogical critique of the current school reform movement, as well details about the increasing resistance efforts on the part of parents, teachers, and the general

Who gets to decide what

people do or do not need? In modern France, scientists, both amateur and professional, were engaged in defining and measuring human needs. These scientists did not trust in a providential economy to distribute the fruits of labor and uphold the social order. Rather, they believed that social organization should be actively directed according to scientific principles. They grounded their study of human needs on quantifiable foundations: agricultural and physiological experiments, demographic studies, and statistics. The result was the concept of the "vital minimum"-the living wage, a measure of physical and social needs. In this book, Dana Simmons traces the history of this concept, revealing the intersections between technologies of measurement, such as calorimeters and social surveys, and technologies of wages and welfare, such as minimum wages, poor aid, and welfare programs. In looking at how we define and measure need, Vital Minimum raises

How GDP came to rule our lives—and why it needs to change Why did the size of the U.S. economy increase by 3 percent on one day in mid-2013—or Ghana's balloon by 60 percent overnight in 2010? Why did the U.K. financial industry show its fastest expansion ever at the end of 2008—just as the world's financial system went into meltdown? And why was Greece's chief statistician charged with treason in 2013 for apparently doing nothing more than trying to accurately report the size of his country's economy? The answers to all these questions lie in the way we define and measure national economies around the

world: Gross Domestic Product. This entertaining and informative book tells the story of GDP, making sense of a statistic that appears constantly in the news, business, and politics, and that seems to rule our lives—but that hardly anyone actually understands. Diane Coyle traces the history of this artificial, abstract, complex, but exceedingly important statistic from its eighteenth- and nineteenth-century precursors through its invention in the 1940s and its postwar golden age, and then through the Great Crash up to today. The reader learns why this standard measure of the size of a country's economy was invented, how it has changed over the decades, and what its strengths and weaknesses are. The book explains why even small changes in GDP can decide elections, influence major political decisions, and determine whether countries can keep borrowing or be thrown into recession. The book ends by making the case

that GDP was a good measure for the twentieth century but is increasingly inappropriate for a twenty-first-century economy driven by innovation, services, and intangible goods.

**Green metamorphoses: agriculture, food, ecology** B. Torquati 2020-10-14 This book offers a wide selection of contributions presented at the LV Conference of Italian society of agricultural economics (SIDEA) Studies. Agricultural economists and sociologists reflect on the change processes that are affecting the agri-food systems and take a small step towards an improved understanding of the complexity of green

metamorphosis, and the interplay between agriculture, food and ecology. The key message is that a green metamorphosis has been taking place, increasingly involving more and more aspects and dimensions: from environment to consumers' preferences, from social value to human health, from profitability to governance issues.

Furthermore, this book tries to shed a light on the complexity of the new agricultural paradigm, which involves technology as well as traditions, trying to understand the ongoing metamorphosis taking into account that 'nothing is created, nothing is destroyed, everything is transformed'. This volume intends to guide the new generations of agricultural economists, who have the hard task of leading the green metamorphosis across the four main axes of sustainability: economic, socio-cultural, environmental, and political.

dominant economic framework in modern history, but it is unclear how it really works. Relying on the free movement and spontaneous coordination of seemingly infinitesimal market forces, its very essence is remarkably complex. Geoffrey M. Hodgson offers a more precise conceptual framework, defines the concepts involved, and illustrates that what is most important, and what has been most often overlooked, are institutions and contract law. Chapter by chapter, Hodgson focuses in on how capitalism works at its very core to develop his own definitive theory of capitalism. By employing economic history and comparative analysis toward explanatory and analytical ends, Hodgson shows how capitalism is not an eternal or natural order, but indeed a relatively recent institution. If anyone were qualified to venture such a comprehensive and definitive analysis of such an important economic, legal, and social phenomenon, it is Geoffrey

Hodgson. "Conceptualizing Capitalism" will significantly alter and carry forward our understanding of markets and how they work."
